

# Population

---

The goal of the Population Program is to promote voluntary family planning and good reproductive health outcomes for everyone, because of the benefits this brings to individuals, societies, and our entire global community.

The Program is designed to benefit: the world at large, by enabling sustainable rates of population growth; societies whose members can emerge from a life of bare subsistence; individuals, particularly women and girls, in terms of their physical and emotional health and well-being; and children whose parents want them and have more time to help them mature into responsible and productive adults.

---

## *Program Guidelines*

Family planning/reproductive health (FP/RH) embraces, but is not limited to, helping women and families choose the number and spacing of children, protecting against sexually transmitted infections, and eliminating unsafe abortion. While improvements in FP/RH have improved lives in many places, there are still outstanding challenges to, and opportunities for, the full achievement of good RH outcomes for all. The Program therefore concentrates on:

- Protecting and promoting the FP/RH of Americans through support of policy analysis and education, with a particular emphasis on vulnerable populations in California and expansion of on-the-ground service delivery in partnership with the Foundation's Regional Grants Program (see pp. 69–70).
- Mobilizing resources for FP/RH and promoting evidence-based policies by supporting policy-relevant research, analysis, and advocacy concerning the relationships between population, poverty alleviation, and economic growth; the roles of basic and secondary education in improving RH and development outcomes; enhancing the role of science in FP/RH and HIV/AIDS programs; and implications of current demographic trends. Some of these efforts are in partnership with the Education and Global Affairs Programs.
- Developing the next generation of population scientists, particularly in sub-Saharan Africa, by supporting graduate training and strengthening partnerships between African and developed country universities and research centers.
- Improving access to FP/RH care through increasing the avail-

ability of effective (but underused) options for reducing unintended pregnancies and sexually transmitted infections and strengthening the linkages between FP/RH and HIV/AIDS programs. The Program will support the delivery of innovative FP/RH services and improved access to these services, document best practices, and inform FP/RH policies. This work is focused on the world's poorest regions—particularly sub-Saharan Africa and South Asia.

**In 2004, the Population Program made grants totaling \$32,871,945.**

#### *Family Planning/Reproductive Health in the United States*

In 2004, twenty-nine grants, representing 35 percent of the grants budget, were made to a broad range of U.S. organizations working to ensure that policies and resources are in place to promote the reproductive health of Americans, particularly our most vulnerable citizens, and to promoting full access to comprehensive services, education, and rights. In addition, several grants went to support public education, advocacy, and service delivery in California.

#### *Family Planning/Reproductive Health Policies, Funding, and Education*

More than thirty grants in this area were awarded in 2004, constituting 32 percent of the year's grants budget. Nearly half of these grants supported population and reproductive health advocacy organizations worldwide. These grants included \$2.4 million to groups working with European donor countries and \$2.7 million to groups focused on the United States, which remains the largest source of population assistance globally. Grants to both the United Nations Population Fund (UNFPA) and the U.S. Committee for the UNFPA supported the work of the United Nations on population and reproductive health issues.

Training the next generation of population scientists continues to be an important part of the Program, with \$1.2 million in grants going to six universities. This work is complemented by grants for research supporting evidence-based policies and programs in population and reproductive health. In addition to one core research grant, the Program launched its research initiative on

## *Program Report*

the role of population and reproductive health in promoting economic development with a grant to the Center for Global Development.

Four grants totaling \$915,000 were made to support universal basic and secondary education.

*Improving Access to FP/RH Care*

Seventeen grants in 2004 (33 percent of the 2004 budget) were awarded to organizations that provide access around the world to comprehensive education and services and that foster an enabling policy environment for provision of these services. Large general support grants went to core institutions that have received long-term support from the Foundation, such as the International Planned Parenthood Federation, Marie Stopes International, and Pathfinder International. Grantmaking in 2005 will focus on expanding access to underused reproductive health options and elucidating and strengthening linkages between FP/RH and HIV/AIDS programs.

## *Family Planning/Reproductive Health in the United States*

<b>ABORTION ACCESS PROJECT</b> Cambridge, Massachusetts <i>For general support</i>	\$100,000
<b>ADVOCATES FOR YOUTH</b> Washington, D.C. <i>For general support</i> <i>For development of a new contract management database (Collaboration with Philanthropy)</i>	700,000 0
